

Information

General layout programme information

You need a graphics programme which allows you to create special colours as colour mode (e.g. InDesign, Illustrator, QuarkXPress, CorelDraw etc.). Office programmes and image editing programmes are not suitable for the creation of this product!

Weaving colours

Weaving colours are dyed threads, which are used for the production of our wrist bands and are available with 8 different coloured threads.

Please note, that “white” is considered as a separate thread colour, which will be counted as an individual thread colour, if used in your artwork.

Should you define only one weaving colour, your wrist band would be single coloured, which means that only a single coloured thread according to your colour selection will be used. A file is required for the print of a single coloured wrist band as well.

Weaving colours as spot colour in your artwork

- Please use only spot colours in your artwork (no CMYK, RGB, LAB)!
- The chosen spot colours have to coincide with you order in number, colour value and spelling (e.g. HKS 1N, HKS 13N, HKS 47 N etc.)
- All spot colours need to be 100% opaque (no colour screen)!

Application of the colour “white”

- Graphic elements and backgrounds, which are created with the colour white (this applies for areas with “paper white” as well), need to be defined as well as a spot colour.
- This colour layer has to be entitled as “white”
- Please be aware of the spelling and do not use special characters.

Graphic elements and writings in your artwork

- Please only use Vector graphics (no pictures)!
- Please do not use graphic effects (e.g. colour gradients, colour screens, transparencies, cast shadows, 3D effects etc.)
- The thinnest line with should be at least 0,5 pt (0,18 mm)
- Block letters are preferred (e.g. Arial)!
- Font size should be at least 10pt
- Fonts need to be converted into paths (curves)

Important information

- Round graphic elements and circular arc shapes cannot be realized properly, due to its woven manufacturing.
- The indicated HKS-values are only comparative values (displaying in monitor colours) and therefore the utilized threads might differ slightly in colouring.

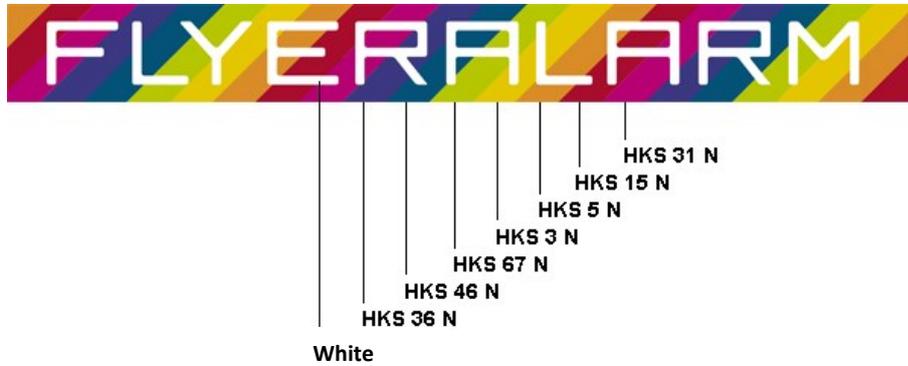

Information

General layout programme information

You need a graphics programme which allows you to create special colours as colour mode (e.g. InDesign, Illustrator, QuarkXPress, CorelDraw etc.). Office programmes and image editing programmes are not suitable for the creation of this product!

Example:

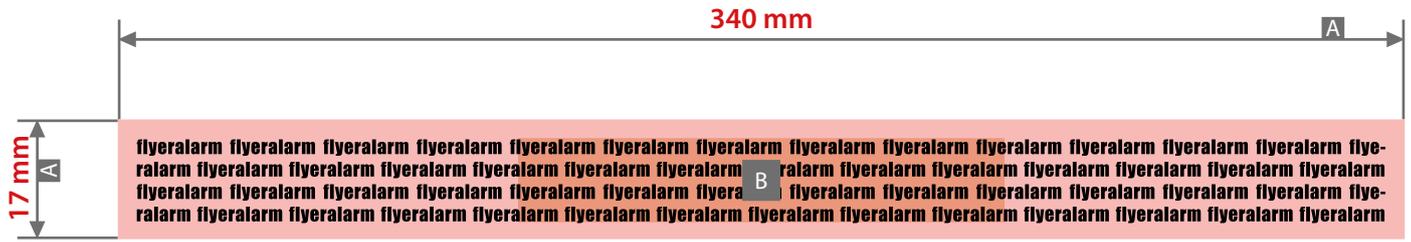

Wrist band with 3 weaving colours: 7x HKS N, 1x White (= 8 spot colours)

Advice

Please use HKS 88 N for the black colour.

Event wristband fabric woven, 340 x 17 mm

Sketches are not to scale

Safety distance (y)
2 mm

- A = Artwork format
- B = Optimal visual range
140 x 15 mm, centric
- C = Illustration of finished format

! Only HKS colours are possible for the creation of your artwork, additionally the color white!

Slight deviations of the yarns can not be excluded!
